## SUMMARY

Backend Engineer with 2.5+ years of experience architecting resilient, distributed microservices, event-driven streaming pipelines (Kafka), and workflow orchestrations (Temporal) powering high-scale systems and AI integration layers. Optimized 25+ Spring Boot APIs achieving a 50% latency reduction and engineered automated CI/CD pipelines cutting deployment failures by 90%.

## TECHNICAL SKILLS

**Languages & Frameworks:** Java (17/21), Spring Boot, Spring Security, Spring AI, TypeScript, React, Angular  
**AI & LLM Integration:** Claude API, Google Gemini API, OpenAI API, Ollama, LangChain4j, RAG, Prompt Engineering  
**Databases & Search:** PostgreSQL, MySQL, Redis, pgvector, Qdrant  
**Distributed Systems & Cloud:** Apache Kafka, Temporal, Docker, Kubernetes, Rancher, Helm, Azure, REST APIs  
**DevOps & Observability:** CI/CD Pipelines, Datadog, Prometheus, Grafana, Linux, Git, SonarQube, Snyk  
**Testing & Methodologies:** JUnit 5, Mockito, Test-Driven Development (TDD), Microservices Architecture

## PROFESSIONAL EXPERIENCE

### ZopSmart

Software Development Engineer II

Bangalore, India

Mar 2026 – Present

- Architected and scaled 20+ Spring Boot microservices with event-driven **Kafka** streaming pipelines, reducing API latency by **50%** and optimizing high-throughput data ingestion pipelines.
- Refactored distributed workflow orchestration using **Temporal**, decomposing monolithic logic into 11+ activities; implemented retries, idempotency, and state persistence critical for long-running workflows and multi-step agent pipelines.
- Orchestrated asynchronous data processing across 7+ high-volume use cases, enabling parallel execution and increasing pipeline throughput by **40%**.
- Spearheaded platform-level architectural standards, reducing onboarding friction for new services; mentored engineers and conducted technical sessions on distributed system resilience.

Software Development Engineer I

Jul 2024 – Mar 2026

- Built 3+ production-grade microservices with automated CI/CD pipelines; reduced build time from **9 to 4 mins** via caching and parallelized stages, cutting deployment failures by **90%**.
- Engineered high-performance backend REST APIs in Spring Boot, handling high concurrency with **99.9% uptime**.
- Enhanced system observability using Grafana, Prometheus, and Datadog, reducing MTTR and accelerating incident resolution.
- Maintained strict software quality standards with **85%+ test coverage** using JUnit and Mockito, eliminating vulnerabilities.

## PROJECTS

### OutreachIQ – AI-Powered Job Discovery & Cold Outreach Platform (GitHub)

Java 17, Spring Boot, Claude API, Gemini API, PostgreSQL, Docker

- Built an autonomous recruitment platform integrating **Claude 3.5** and **Gemini API** for automated job parsing, ATS compatibility scoring (0–100 match rating), and candidate-to-role skill gap analysis.
- Engineered concurrent multi-worker search pipelines using **CompletableFuture** for parallel platform sourcing and automated cold email campaigns via Gmail API (OAuth 2.0) with MX/DNS verification algorithms.

### AI Portfolio & Multi-LLM RAG Chatbot (Live) | (GitHub)

Spring Boot, React, TypeScript, Gemini API, OpenAI API, Ollama

- Developed a full-stack platform featuring a RAG-powered conversational assistant orchestrating multiple LLM providers (**Google Gemini, OpenAI, and local Ollama/Llama 3**) with dynamic resume knowledge-base context injection.

## EDUCATION

### Lovely Professional University

Bachelor of Technology in Computer Science; CGPA: 8.9

Punjab, India

Jul 2020 – Jun 2024

- Coursework:** Data Structures & Algorithms, Distributed Systems, Cloud Computing, Database Management Systems (DBMS), Operating Systems, Object Oriented Programming (OOP)
