

# Parth Nautiyal

parthnautiyal2002@gmail.com | LeetCode | GitHub | LinkedIn | 7453886885

## SUMMARY

Full-stack engineer with hands-on experience optimizing more than 25 Spring Boot APIs, achieving a 50% reduction in latency. Implemented CI/CD pipelines that decreased rollbacks by 70%. Focused on writing maintainable Java and TypeScript code, deploying features reliably, and resolving production issues to ensure system stability.

## EDUCATION

- Lovely Professional University** Jalandhar, India  
*Bachelor of Technology in Computer Science; CGPA: 8.9* Jul 2020 – Jun 2024
  - Relevant Coursework:** Data Structures & Algorithms, Operating Systems, Cloud Computing, Database Management Systems, Object Oriented Programming

## TECHNICAL SKILLS

**Programming & Frameworks:** Java, Spring Boot, Spring Security, TypeScript, Angular.js  
**Databases:** MySQL, NoSQL  
**Cloud & DevOps:** Azure, Docker, Kubernetes, Rancher, Helm  
**Integration & Messaging:** REST, Kafka, Temporal  
**Version Control & OS:** Git, Linux  
**Monitoring & Observability:** Grafana, Prometheus, Datadog  
**SDLC Tools:** JIRA, Confluence, SonarQube, Artifactory, Snyk

## PROFESSIONAL EXPERIENCE

**ZopSmart (~2 years)** Bangalore, India  
*Software Development Engineer II (Promoted)* Mar 2026 – Present

- Designed and scaled 20+ Spring Boot microservices in a distributed, event-driven architecture using Kafka, reducing latency by **50%** and improving system throughput and reliability under high-load conditions.
- Refactored distributed workflow orchestration using **Temporal**, decomposing monolithic logic into 11+ activities; implemented retry, idempotency, and failure handling to improve reliability of long-running workflows.
- Orchestrated asynchronous workflows across 7+ use cases, enabling parallel processing and improving throughput for high-volume product data pipelines.
- Drove platform-level standardization across services, improving configuration consistency and reducing onboarding friction for new services.
- Mentored 2 interns and led knowledge-sharing sessions on distributed systems and workflow orchestration.

*Software Development Engineer I* Jul 2024 – Mar 2026

- Built 3+ production-grade microservices with CI/CD pipelines; reduced build time from **9 to 4 mins** via caching, pipeline upgrades, and automated retries, cutting failures by **90%**.
- Developed scalable backend services using Spring Boot and REST APIs, ensuring efficient request handling in distributed environments.
- Improved system reliability and observability using Grafana, Prometheus, and Datadog, reducing MTTR and resolving production issues.
- Ensured code quality with **85%+ coverage**, eliminated vulnerabilities, and enforced testing using JUnit and Mockito.
- Collaborated with QA and cross-functional teams to deliver stable, production-ready features with faster turnaround times.

## PROJECTS

**Training and Upskilling Platform (GitHub)** Angular, TypeScript, MySQL

- Built a full-stack learning platform for 500+ users with real-time progress tracking and automated workflows, improving user retention by **40%** and course completion rates by **35%**.
- Designed backend services for course management, scheduling, and certificate automation, reducing manual administrative effort by **6+ hours/week**.
